

## MINILAB

### MINILAB ML-101, DISPENSER

Indispensable in clinical chemistry, biology, pharmacology, biochemistry, and wherever precision in dosing liquids is required.

For dispensing of up to 48 repetitions of 22 different volumes throughout the use of disposable syringes (Dispenser Tips).

For solid-phase pipetting in the range 10 to 5000 $\mu$ l.

#### Characteristic Features:

- The volume to be pipetted is determined by the capacity of the syringe ( Dispenser Tips) used and the dial setting corresponding to different piston strokes.
- If the liquid level in the syringe (Dispenser Tip) is less than the required pre-set volume - the build in lock automatically prevents its ejector.

**Cat. No. 11.0. - Minilab ML-101**
